Skills

Self Definition

I've been close to the IT world since I was a kid, but I have been studying Web Development at higher levels for two years. I have acquired my knowledge by myself, mostly in English. The majority of my skills is related to front-end technologies, but I have also written smaller programs in Node.js, Java and Python. I am highly motivated to be part of larger projects in a work environment as a Junior Web Developer.

Strength

I like creating new, useful things. I am persistent, enthusiastic and try to do my job to the best of my ability. I prefer to work independently, but I also like working in a team. Most of my experience is related to the Angular framework. I am interested in all areas of IT and it is also my hobby.

Work Experience

Employee (2018-2021)
